

DISCOVER THE SELF-SERVICE KIOSKS OF SYX AUTOMATIONS

The high-end self-service kiosks of Syx Automations offer an additional point of sale to maximise the customer experience at your venue.

Using the self-service solutions offered by Syx Automations, long queues at the point of sale are reduced to a minimum. The kiosks are the ideal solution during periods of low attendance and require no staff intervention.

Syx Automations develops kiosks for both indoor and outdoor use.

SELF-SERVICE KIOSK FOR IN AND OUTDOOR USE

ReCreateX interface

Network-based self-service kiosks operate as a self-service ReCreateX point of sale. The terminal is connected to your ReCreateX database in real time through a network connection. The kiosks are able to print day tickets and membership cards using a variety of tickets such as bar code, magnetic or mifare technology. In the more compact version, these kiosks are frequently used for issuing vouchers and e-wallet/money cards.

Various payment options

The network-based self-service kiosks always contain a built-in PC and an intuitive touch screen that allows the system to guide your customers through the different steps of the sales process. The kiosks can be equipped with note readers, coin slots and secure Chip & Pin payment terminals.

Functional and aesthetic

This self-service point of sale or payment terminal consists of a reinforced housing and is available in different formats, depending on the desired measurements. The front plate is entirely customised according to the customer's wishes and can be changed periodically. Knokke-Heist (one of our Belgian customers) uses temporary images that change according to the current exhibitions.

SELF-SERVICE KIOSK FOR INDOOR USE

This ultra-modern kiosk can be used for several purposes: booking fitness/sport activities, renewing membership and multiple session cards, buying tickets etc.

Moreover, your customers will now be able to pay at the kiosk. Issuing tickets and payment certificates is possible through the kiosk as well!

The kiosk can be customised using a personalised layout.

FUNCTIONALITIES OF THE SELF-SERVICE KIOSK

- Ticket sales, directly linked to access control or hand scanners
- Ticket sales for theatre productions using the best-available-seat principle
- Ticket sales integrated with car park systems
- Season ticket sales

FUNCTIONAL CHARACTERISTICS

- Touch screen control
- Solid, secure construction for both indoor and outdoor use
- Multiple lock system and security lock
- Anti-graffiti coating
- Personalised, custom-made layout
- Quick delivery
- Short implementation time
- Easy to use
- Support 24/7

REFERENCE KNOCKE-HEIST

This self-service kiosk is used for ticket sales for temporary exhibitions and for theatre shows. It is equipped with a Boca printer (ticket printer) and a magnetic card reader that can read the culture pass (discount card) used in Knokke-Heist. The tickets can only be paid with credit cards so that the machine never contains any cash money. A barcode is printed on the tickets. This barcoded ticket is a valid entrance ticket for the exhibition. At the exhibitions, the barcoded ticket is scanned by the wireless access control system. Tickets for the theatre shows are scanned in real time using wireless hand scanners.
